AGM 2013

PARS VHF / UHF Experimental Repeaters

AP2AUM

Major activities carried out during 2012

AGM 2013

- **VHF/UHF repeater expansion**
- **Echo Link establishment and Utilization**
- **DXpedition (HF operation)**
- **Lahore Chapter**
- **PARS training session 2012**

Basics Of a Repeater

- Receives a signal and re-transmits it, usually with higher power and from a better location, to provide a greater communications range.
- Located atop a tall building or high mountain, VHF and UHF repeaters greatly extend the operating range of amateurs using mobile and hand-held transceivers.
- If a repeater serves an area, it's not necessary for everyone to live on a hilltop. You only have to be able to hear the repeater's transmitter and reach the repeater's receiver with your transmitted signal.

Linking Repeaters

Pakistan Amateur Radio Society

AGM 2013

THE CONDOR CONNECTION

Echolink Node AP2CJ-R

AP2CJ

General Topics

- What is EchoLink?
- Various Modes
- EchoLink Software
- Physical Radio Interfacing
- Is it really Amateur Radio?

What is EchoLink?

- EchoLink uses VoIP (Voice Over Internet Protocol) to allow licensed Amateur Radio Operators to communicate with other Amateurs via the Internet.
- It is primarily a Windows based application and is offered free of charge at <http://www.echolink.org>.
- There is also a new EchoLinux and EchoMac available.
- It was developed by Jonathan Taylor (K1RFD) in 2002 (*He received Hamvention 2003 Special Achievement Award*).

Validation

- Each new user of EchoLink must provide proof of license before access is granted. This is to ensure that only licensed Amateurs have access to the system, and to ensure that each user is using a valid callsign that he or she is authorized to use.

What Modes are Available?

- UserMode : EchoLink can be operated strictly between two computers connected to the Internet using the PC soundcard with Speakers and a Microphone.
- Link Mode : EchoLink can be interfaced to a standard FM transceiver as a “simplex link” from your home QTH.
- Repeater Mode : EchoLink can be interfaced to a VHF or UHF repeater for more coverage.

EchoLink "User Mode"

EchoLink

In its simplest form, EchoLink can involve two Hams talking strictly from PC to PC..

Is this really Ham Radio?

EchoLink

In its simplest form, EchoLink can involve two Hams talking strictly from PC to PC..

It Depends upon how you “use” it!!

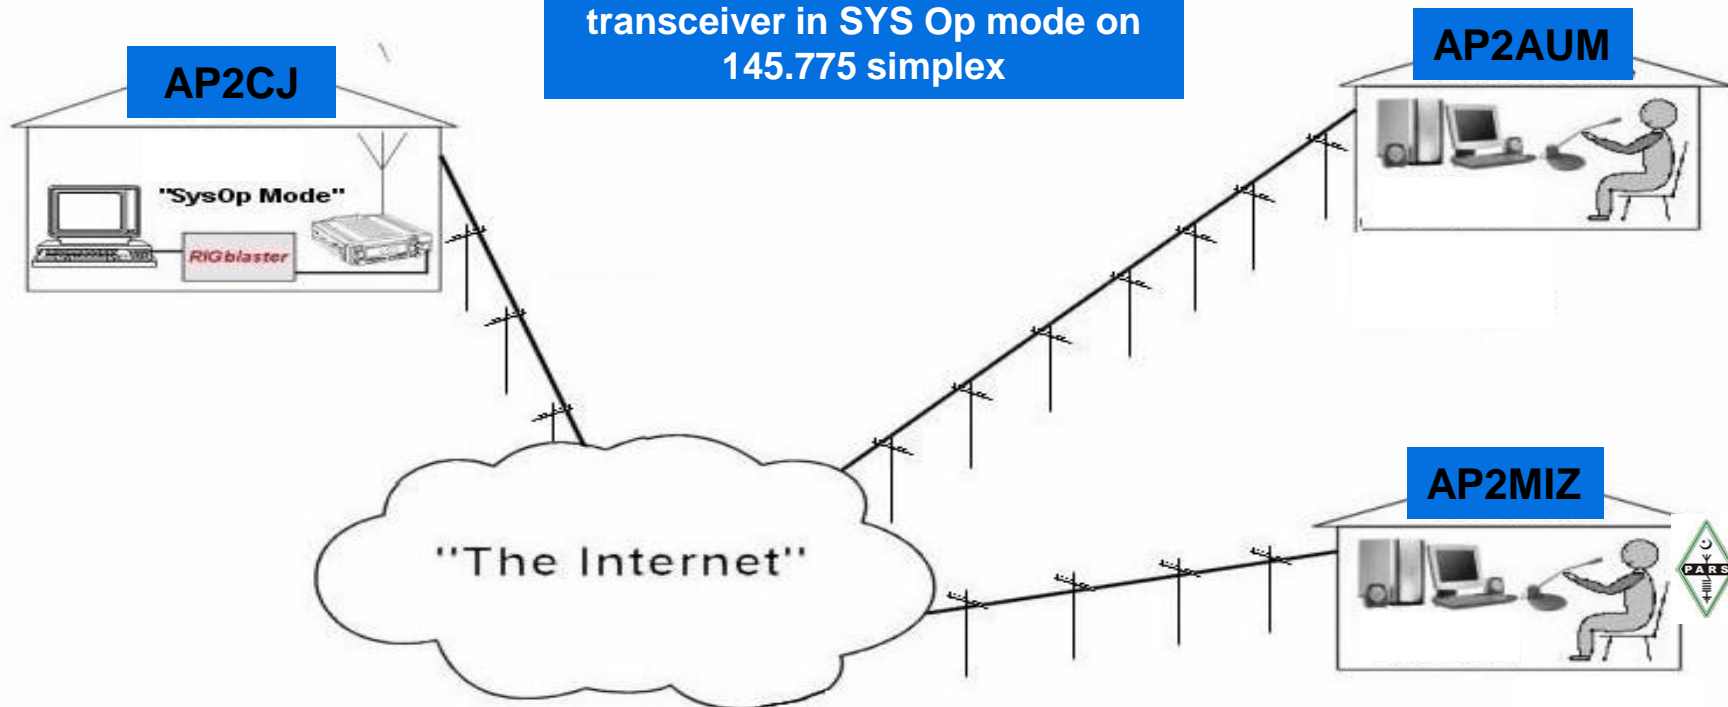

- Single User PC to PC involves no RF
 - It is just another Internet “Chat Room”
- A Simplex-Link or Repeater connection now makes it a “new” Amateur Radio Mode.

Adding a "Simplex-Link"

EchoLink

And now we have AP2CJ joining the conversation with his 2 meter transceiver in SYS Op mode on 145.775 simplex

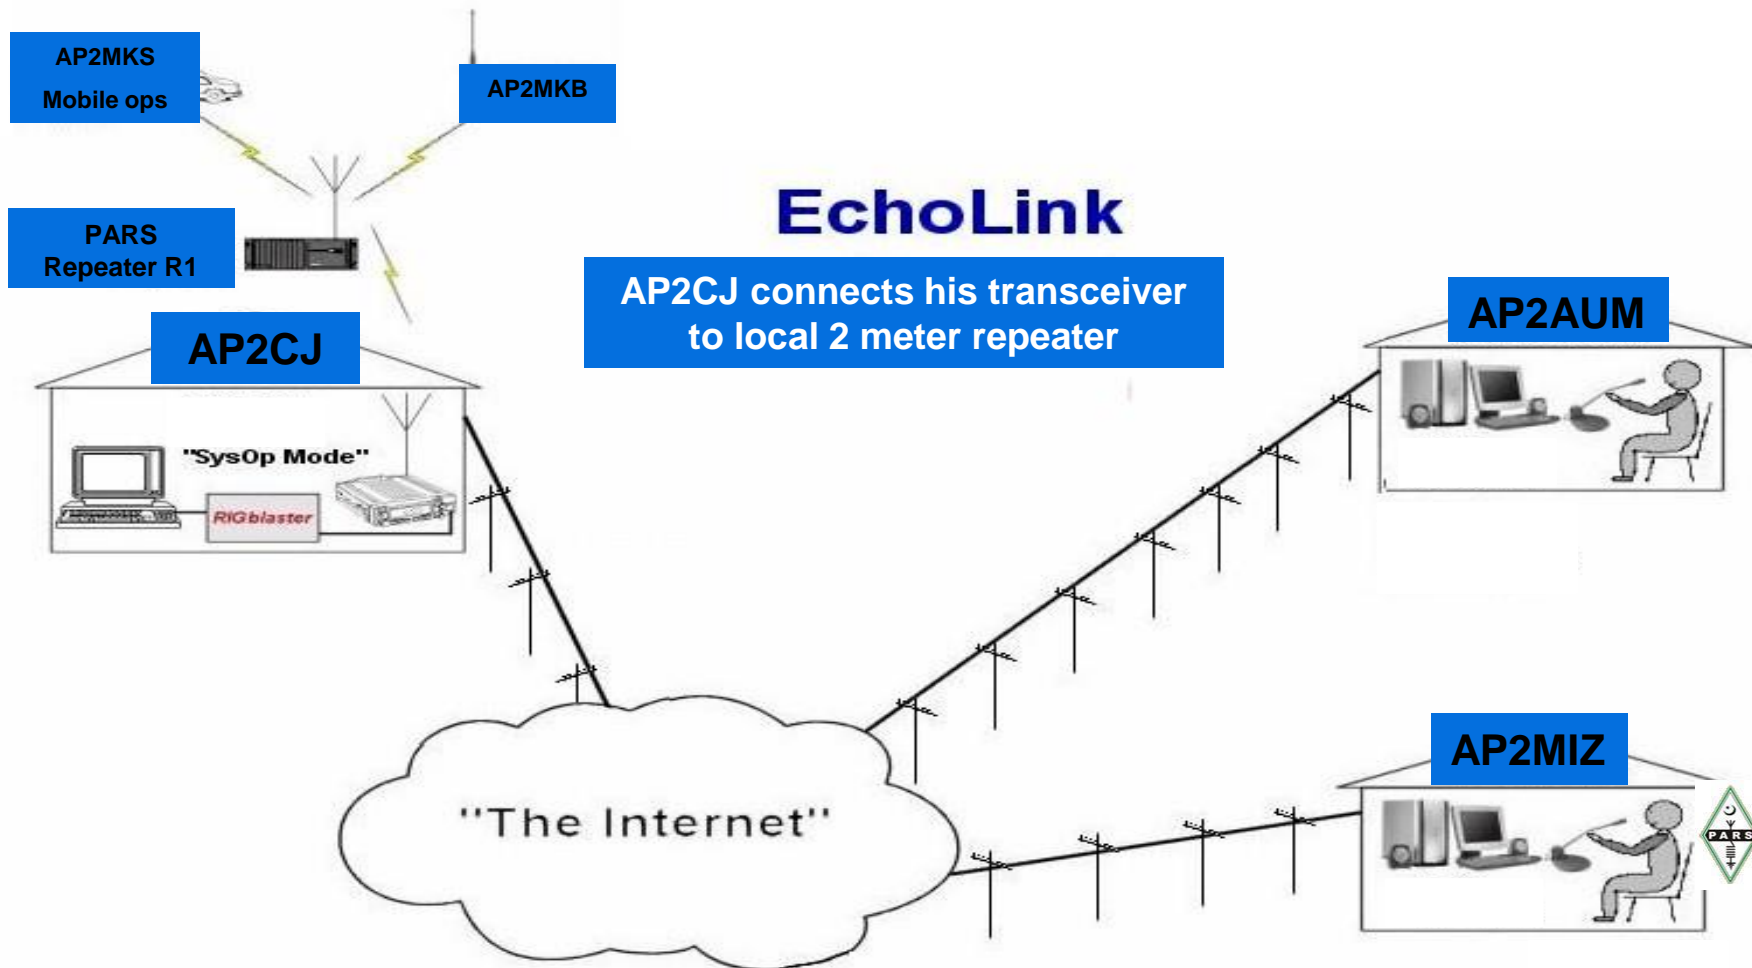

Expanding the "Link"

EchoLink

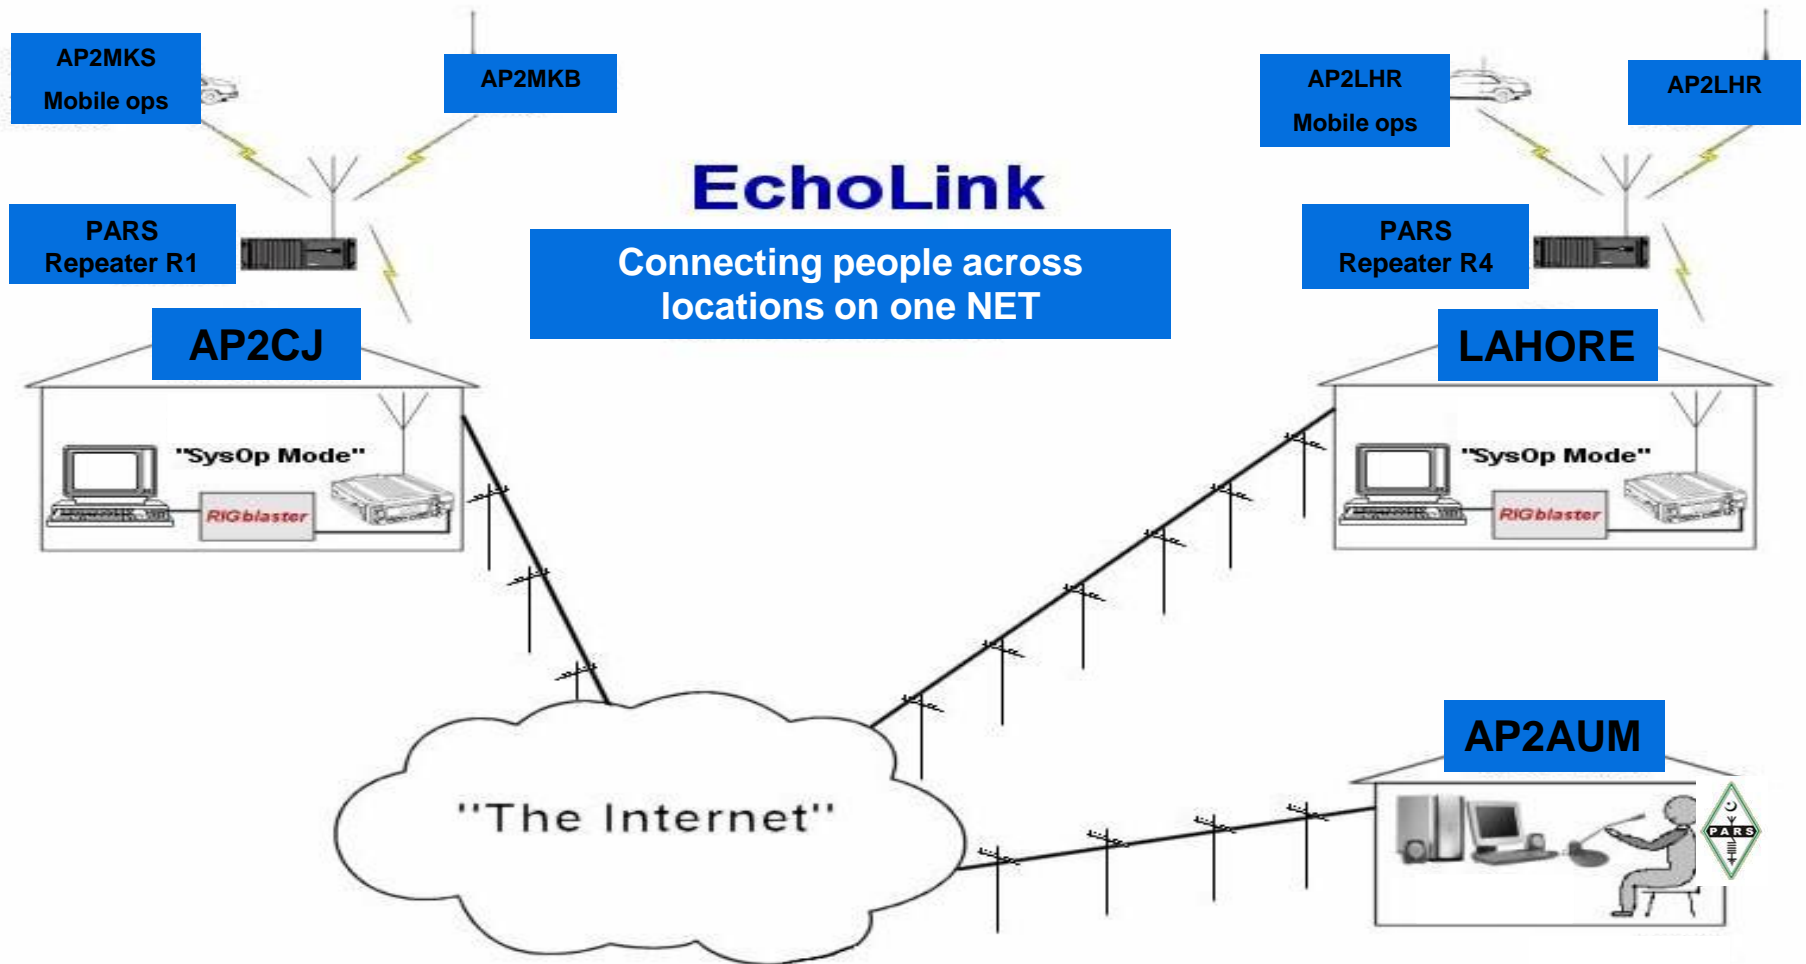

AP2CJ now takes his HT also tuned to 145.775 and goes in back yard to operate

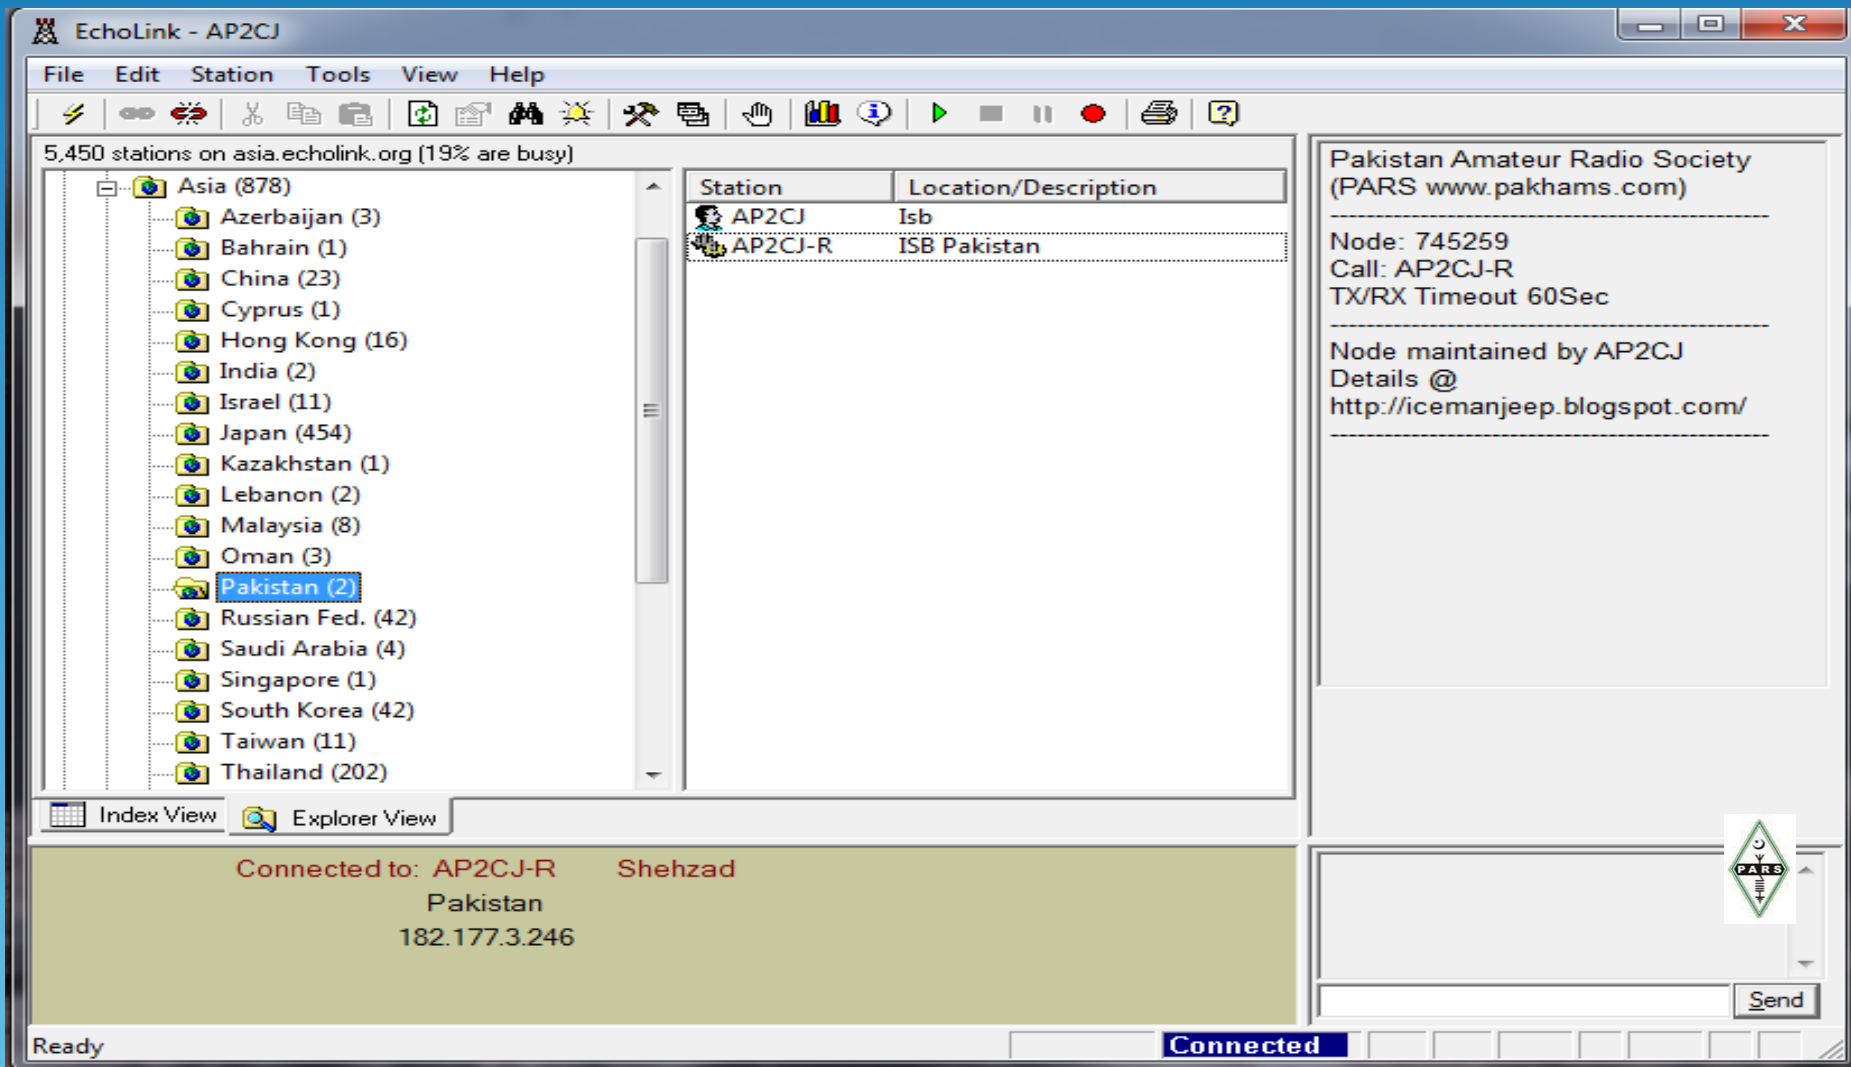

Adding a Repeater

Bringing it all Together

And now -- The Software...

What's Needed

Transceiver

Computer and Software

Interface

How we built it

- Old PIII running windows XP

- IC-H16 HT

- WiFi internet 2mbp/s

- DB9/RS232 Interface

Special thanks to AP2AUM and AP2MIZ

Some Soundcard Interfaces

The RIGblaster is the more common interface, with jumpers to configure any brand of microphone and rig.

Some Setups

EchoLink Clients

- Iphone / ipads
- Android phones / tabs

But Again – *"Is it Ham Radio?"*

- As long as there is a Simplex or Repeater Link involved it is a new "mode" – It is that simple!
- Worldwide Regulatory agencies like the FCC, ART, IBPT, OFCOM, SRR, etc. have recognized it as another Ham "tool" like SSTV or PSK31.
- Using these "links" you must still ID and follow all regulations, including International rules and Third party agreements.
- If we don't keep using our Radios in as many modes as we can, we are going to lose some of the band allocations we have worked so hard for.

Some Comments

Although Amateur Radio has grown to embrace new technologies and has now become more than just “Radio” , it is really “*nothing*” without “Radio”....

DXpedition (HF operation) **Kalam – Summer DXpedition**

AP2MF

The Destination

- Mahodand Lake - Kalam -
- Date: July 14-15th

Published Dx- Calendar

● – 15/7

PAKISTAN; AP2ARS

by AP2AUM, AP2MF and AP2MKS from **Swat District** (Grid Locator:MM65HH) between 1300z July 14th and 1900z July 15th. They will operate from an elevation of 2300m ASL using frequencies 7050 and 14150 kHz, and the satellites. Power output will be 150 watts to an Inverted V dipole for HF and an egg beater for the satellite communications). QSL via: PARS AP2ARS, P.O.BOX 1450, Islamabad,44000, Pakistan.

Hams

- Following HAMS actively participated and made contacts in the activity.

ap2cj

Yasir Khan

SWLs – the learners

- Few more SWLs witnessed the activity and helped in setting up the camps & antennas

Nadeem Naeem

Nauman

Shabab Haider

Zohaib Jadoon

Hassan Rana

Working conditions

- Yasue FT857D – with Watson multiband HF antenna
- Icom IC7000 – with 20m inverted V Dipole
- Kenwood TS50 – with 40m inverted V
- Freezing Temperature and winds 😊

The Activity

- The WX was nice and cold however since there were lofty mountains (15000 feet) on 3 sides of the DX location, as well as paucity of time hence fewer contacts were achieved.
- We had 2 HF radios with Dipoles working on 20 and 40 meter and one Mobile setup working 4 bands.
- The receive signals were amazingly loud and clear.
- Most of our reports from Europe, Indonesia, Malaysia and Russia were 5.9. The call used was AP2ARS
- Nevertheless it turned out to be an excellent event.

Pakistan Amateur Radio Society

AGM 2013

Lahore Chapter

PAKISTAN AMATUER RADIO SOCIETY – LAHORE CHAPTER

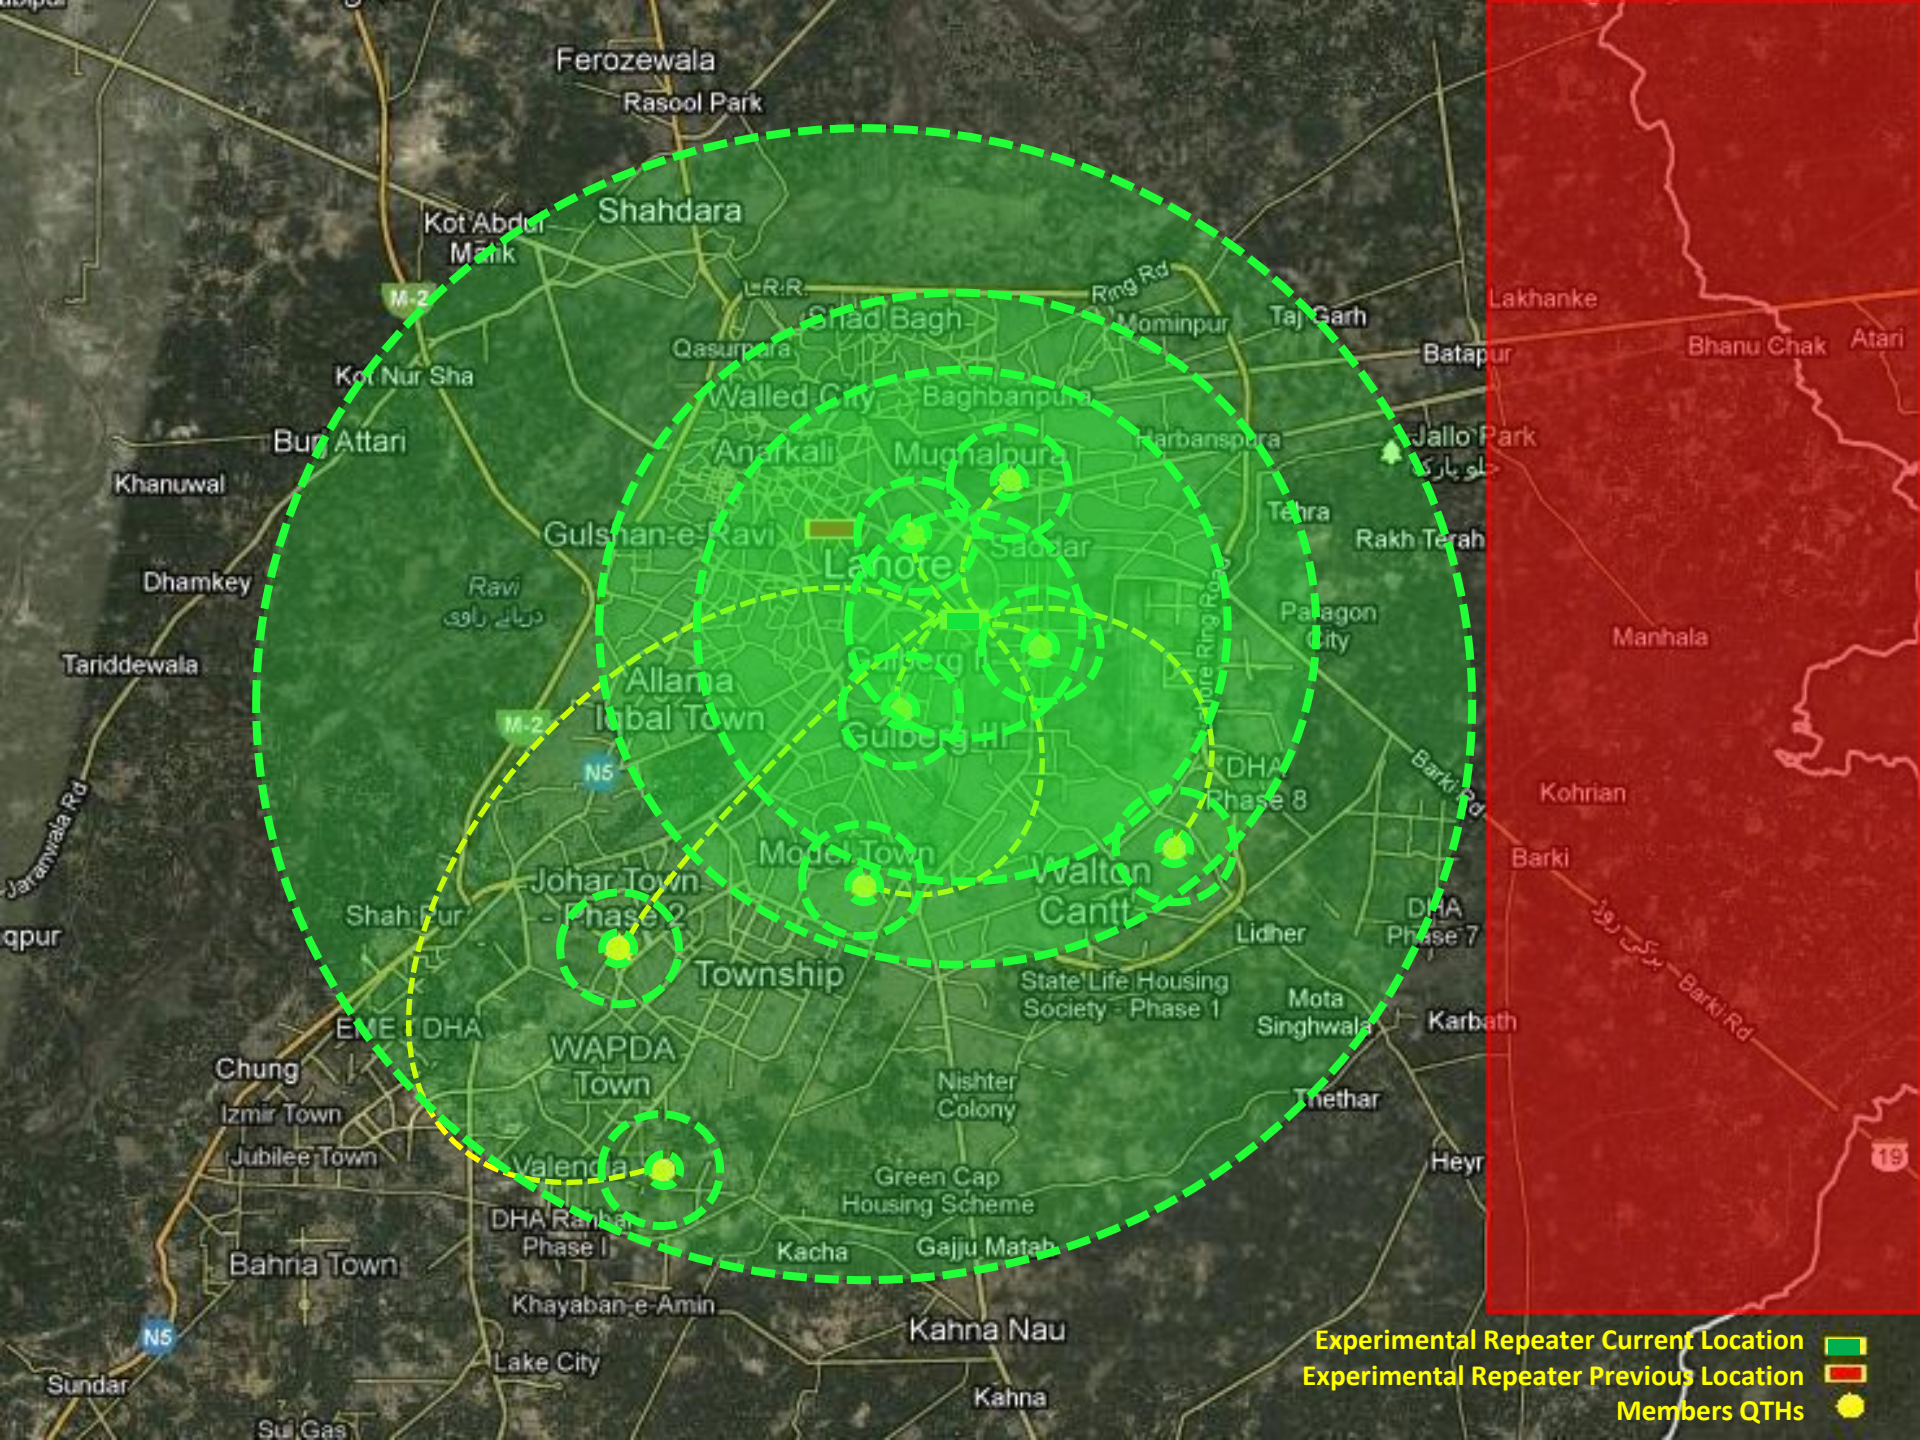

ACHIEVEMENTS AND UPDATES

Annual General Meeting 31st March 2013 – Islamabad

BACKGROUND

 Lima experimental repeater placed at PTV Station Lahore and antennas mounted on 350 ft high tower

 AP2UK looking after the upkeep of Lima experimental repeater

 Senior hams practicing this hobby but either most of them were dormant or were using HF and hence were not very much inter connected and hence the Lahore experimental repeater upkeep was not at desired levels merely because of the fact that not many were dependent on it

NEW ENTRANTS GET TOGETHER – INSTANT ACTION

 On the encouragement of AP2AUM, a few new aspiring entrants planned a meet with AP2SBA and AP2MUT

 First meeting resulted in a long discussion in a light mood over a cup of coffee on 2nd Nov 2012 and ended in a unanimous decision of getting the Lahore experimental repeater up; which had been down for sometime

 Action team comprising of AP2SBA, AP2MUT, ARSKWB, ARSGT and ARSDD was made and tasks were assigned for the next day

 On 3rd Nov 2012, the action team reached PTV Station Lahore where AP2UK was present to coordinate the effort

 ARSGT had arranged riggers as it was decided to replace the antenna also

NEW ENTRANTS GET TOGETHER – INSTANT ACTION

 Cable was soldered to the new antenna which was procured by pooling in of funds and AP2MUT took the lead and started ascending the 350 ft tower along with one rigger

 New antenna was attached at the desired location on the tower

 AP2UK set on his speciality and after much required work, finally the experimental repeater was back on line

EVOLUTION OF YAGI

 With in a month the repeater went down and the enthusiastic newbies were impatient enough to think like a true ham

 Seniors were consulted and AP2AUM recommended to try a home made antenna

 On 2nd Dec 2012, ARSDD, ARSKWB and ARSGT got together to make a YAGI

 ARSDD had already sourced all the material and tools required for this experiment

 ARSDD very skillfully turned PVC and copper pipe into a 7db gain antenna – and Lima's beloved "EMP Canon" came into being

 First test was so encouraging that from ARSDD's QTH (approx. 17 aerial KMs away from experimental repeater's QTH at PTV Station) QSO was as crisp as can be

YAGI AND BEYOND

📡 So Rs400 worth of antenna gave further flame of inspiration to the whole group

📡 As soon as this successful attempt was shared with AP2AUM, encouragement poured in for replicating the same and installing YAGI at couple more SWLs' locations and try to get Murree experimental repeater

📡 Meanwhile, Lahore experimental repeater went down again

VOX REPEATER EXPERIMENT

 AP2SBA, ARSDD and ARSAB met up to try and set a repeater with the help of two handy sets and a headset (which was loaned by AP2AUM for this experiment)

 It proved to be a successful one

NEW LIMA EXPERIMENTAL REPEATER

- After exhaustion of various options, it was decided to go for the self help option again and to source a new repeater by way of arranging funds via voluntary member donations
- After lot of deliberations and research, ICOM IC-FR 5000 VHF was finalized
- Funds were pooled in and ARSGT and ARSMUT negotiated a good deal
- Most important was the location and security of the newly bought asset and also a continuous source of power to it
- Qurban line was an ideal solution to this dilemma, its free of cost and secure location
- Tx antenna was set at 60 feet and Rx set at 110 feet

ICOM

FUTURE PLANS AND SUGGESTIONS

- Height of antennas attached with the new Lima Experimental Repeater to be increased; Rx to be increased from 110 to 115 feet and Tx from 60 to 85 feet
- To deploy helix cable on Tx of Lima Experimental Repeater
- For an interrupted power supply, plan is to use solar power panels as Lima weather supports it
- IDAS digital capability to be added in Lima Experimental Repeater
- PARS to facilitate time lag reduction for new hams to get PTA license
- Training workshops to be made a regular feature
- Training workshop to be conducted in Lahore also

Pakistan Amateur Radio Society

AGM 2013

PARS training session 2012

PARS Trainings

Training session was carried out for SWL's and new HAM's by PARS training wing in summer of 2012.

A total of 22 members participated from throughout Pakistan's major cities.

The course covered

- **Basics of Ham Radio**
- **What is VHF, UHF and HF**
- **Propagation**
- **Repeaters**
- **Amateur Satellites**

Thank You
